How to make **\$100** a month in residual income

Set it up once, and your income just keeps on... *coming in!*

## To earn \$100/month, all you need is **one** position on our income ladder

One paying position on the income ladder will generate US\$320 per [cycle](#).

When cycle times are slow, say 90 days, that means you earn a residual income of

**\$320 every 90 days,  
which is...  
\$100+ every 30 days.**

So all you need to earn \$100 per 30 days (average) is ONE paying [position](#) on the YMMSS income ladder.

When cycles are running faster, say 60 days, your one position would earn you

**\$320 / 2 = \$160 per month.**

So you'll see that these \$100-a-month figures I'm giving you here are minimums. Worst case scenarios, if you like.

Click here to review [how the income ladder works](#).  
You can also think of it as a CONVEYOR BELT or a PEOPLE MOVER, transporting you (and a host of other people) forward to the income of your dreams.

## There are **six** different ways to set up your \$100 a month income

1) Buy one \$10 position and wait 6 cycles until it reaches \$640 in value -- at which point it starts to pay you.

At the end of each cycle, your purchase will double in value, as outlined in this chart:

- Your \$10 position is worth \$20 at the end of cycle 1.
- Your \$20 position is worth \$40 at the end of cycle 2.
- Your \$40 position is worth \$80 at the end of cycle 3.
- Your \$80 position is worth \$160 at the end of cycle 4.
- Your \$160 position is worth \$320 at the end of cycle 5.
- Your \$320 position is worth \$640 at the end of cycle 6.

When it's valued at \$640, you will get paid \$320 (and the other \$320 is used to purchase you another position in the income ladder... **so from this point onwards, you get paid \$320 every time any position that you own cycles.**

How long is a **cycle**?  
Typically 60-90 days. So 6 cycles = 12-18 months.
